Personal Statement:
I am an aspiring junior software engineer who loves challenges and enjoys solving problems while continuously lear
 I am proficient in languages such as C#, Golang, and T-SQL. Throughout my learning journey, I constantly challenge

During my time at university, I delved into the core concepts of computer science and improved my programming an
s. I achieved good academic results and actively participated in academic and technical activities to expand my know

Beyond my passion for technology, I have diverse personal interests. During weekends, I love hiking with friends, em
elps me stay energetic and fosters teamwork. In my free time, I enjoy solving coding problems to challenge myself, a

Experience and Achievements:

In a previous job, I participated in a complex enterprise-level application project. The project initially followed a tradi
lopment and maintenance costs, I proactively proposed and led the system redesign into a microservices architectur
 successfully reduced maintenance costs, improved code reusability, and enabled the team to develop and deliver ne

In a previous job, as the business volume grew, the database access faced performance issues. I collaborated with th
tabase access by implementing indexes and adjusting data structures.

I recognize the importance of system stability for businesses. In past projects, I was responsible for designing and im
etrics and logs, as well as setting up alert mechanisms (Teams Alert) to ensure real-time awareness of the system's o
ickly to emergencies and reduce the impact of failures on users and business.

I enjoy sharing my knowledge and experiences and actively participate in training new team members. I guide new te
m's development processes and standards, and help them integrate quickly into the team. Such leadership and colla
rs.
